REA JET

The UFI Code
and the marking of your products

In context of the CLP regulation (Appendix VIII and Article 45) there are short-term new requirements applicable for coding and marking of hazardous goods.

Are you a manufacturer or distributor of products, which can bear health risks ?

Then you need to act now and mark your products with a
„Unique Formular Identifier“ – UFI Code

For products which are determined for use by consumers,
a marking of the UFI Code is *mandatory* from **January 1st 2020.**

Product marking

The 16-digit alfanumeric UFI Code shall be clearly visible, e.g. next to the dangerous goods symbols. This can go in line with the printing of further information, such as e.g. production number and production date (see following example).

Integrated UFI Code in the product marking

Example:

UFI: 1234-abcd-5678-efgh
Prod.: 4711 06.08.2019

In our example, we we have additionaly placed a 2D Data Matrix Code, into which the UFI-Code and the product information _are referenced within. So e.g. a subsequently installed camera system could check if the printed UFI-Code is correct.

The innovative coding and marking solutions of REA are preparing you optimally for a legally watertight implementation of the CLP regulation.

We would appreciate very much to consult you, and to make your products fit for the UFI Code.

Make an appointment still today with us
- we are happy to meet you !
